

East Canyon

Fawn survival was 93% this spring. Hunters must be aware that a big part of this unit is private land and they must have written permission to hunt private lands.

Morgan/South Rich

Fawn survival was 94% this spring. Hunters must be aware that a big part of this unit is private land and they must have written permission to hunt private lands.

Kamas

Fawn survival was 90% this spring. With a mixing of private and public lands, hunters should make sure of the ownership of the land they hunt before the hunt.

North Slope

Due to the migratory nature of the North Slope herd, a spring classification is not conducted. Biologist Randy Wood says that deer are widely scattered throughout this unit.

Chalk Creek

Fawn survival was 92% this spring. Hunters must be aware that a big part of this unit is private land and they must have written permission to hunt private lands.

Ogden

Fawn survival was 88% this spring. Hunters must be aware that a big part of this unit is private land and they must have written permission to hunt private lands.
